

Tool-Use Summary

Santheesh S · Mystri Track B · Product 1 (DICM Core) · 3 h 50 min (230 min)

sivasandy509@gmail.com

1. Purpose and evidence standard

I document tools because Mystri requires transparency. My **authoritative evidence** is: **python product1\verify_product1.py** → **PRODUCT 1 PASS**, 39 unit tests, unchanged **data/**, plus **DECISION.md** and **SOURCES.md**. AI assists drafts; I own decisions.

2. Working principles (theory)

- **Human decision, AI draft** — recommendation and rules are mine after review.
- **Verify before trust** — no AI code ships without verify + tests on the pack.
- **Collection ≠ policy** — file-request tools do not replace 48h/opt-out/reconciliation.
- **Fail closed** — ambiguous rows (e.g. R018) → uncertain, not auto-send.
- **Honest limits** — I do not claim live ROI or the owner's 8 h/week as measured.

3. Tool disclosure table (mandatory)

Tool	What I used it for	How I checked / corrected / rejected
Cursor — Composer	Scaffolded queue_engine.py , parts of integrated_model.py , test stubs, doc structure. Composer in Cursor; no separate paid LLM API for graded runs.	After edits: verify_product1.py + full unittest . Compared logic to DATA_DICTIONARY.md . Fixed conflicting fields → uncertain .
Python 3.10+ (stdlib)	Loader, experiment.py , verify gate, 39 tests, dry-run outputs.	PRODUCT 1 PASS on pack data. Baseline 13 vs rules 5 in test_pack_snapshot_baseline_thirteen_rules_five .
Manual analysis	Deduped event_id ; counts for DECISION.md .	Cross-checked CSVs and tests; rejected owner 8 h/week as unmeasured.
Web / vendor docs	OneDrive/Dropbox file-request; Microsoft Learn share-files; Jotform (limited).	Recorded in SOURCES.md with dates, claims, limits.

4. AI vs my responsibility

Role	Responsibility
AI (Composer)	Boilerplate code, test skeletons, first-pass documentation.
Me (applicant)	Rule semantics, evidence numbers, Product 1 scope, pass/fail gate, SOURCES claims.
Reject rule	If verify or tests fail → I fix or revert; I do not accept failing AI output.

5. What I did not use

Category	Reason
Paid LLM API keys	Track B allows free tools; graded proof uses stdlib + local verify.
Deployment / hosting	Out of scope; dry-run only.
Live email / SMS / WhatsApp	Not required; simulated in trace/JSON only.
Editing Mystri data/ for grades	Verify assumes original pack CSVs.

6. Concrete example (issue I caught)

Step	What happened
Problem	Composer produced an invalid dataclass update in queue-related code.
Signal	Unit tests failed — not a cosmetic warning.
My decision	I rejected the assistant's version.
Fix	Rewrote using dataclasses.replace .
Verification	Full unittest, then verify → PRODUCT 1 PASS .
Lesson	AI output is provisional until verify + tests pass on pack data.

7. How this links to my submission

Artifact	Role
DECISION.md	~617 words (excl. tables); problem, claim, alternatives, counterargument.
HANDOVER.md	Run commands, evidence table, tool judgment.
SOURCES.md	External URLs + how I used each source.
product1/verify_product1.py	Single reviewer gate → PRODUCT 1 PASS.
