

Tool-Use Summary

Santheesh S · Mystri Track B · Product 1 · 3 h 50 min (230 min)

Dry-run rules pipeline on Mystri data; **DECISION.md**; gate: `python product1\verify_product1.py` → **PRODUCT 1 PASS**.

Tools I used (mandatory disclosure)

Tool	What I used it for	How I checked / corrected
Cursor — Composer (AI coding assistant)	Scaffolded <code>queue_engine.py</code> , parts of <code>integrated_model.py</code> , test stubs, and first-pass docs.	Ran <code>verify_product1.py</code> (PRODUCT 1 PASS) and full <code>unittest</code> after edits. Matched rules to DATA_DICTIONARY.md ; fixed conflicting fields (pending + received_at → uncertain).
Python 3.10+ (stdlib only)	Loader, <code>experiment.py</code> , verify gate, 39 tests.	No paid APIs. Baseline 13 vs rules 5 ; test <code>test_pack_snapshot_baseline_thirteen_rules_five</code> .
Manual analysis	Deduped <code>event_id</code> ; counts for DECISION.md .	Cross-checked CSVs/tests; rejected owner 8 h/week as unmeasured.
Web / vendor docs	OneDrive/Dropbox file-request; Microsoft Learn share-files.	Logged in SOURCES.md with dates, claims, limits.

Not used: paid LLM APIs, deployment, live messaging, interviews.

Concrete example — issue I caught

Invalid dataclass update from Composer → tests failed. Fixed with `dataclasses.replace`; re-ran tests + verify → **PRODUCT 1 PASS**.

AI vs my judgment

- **AI:** boilerplate, test skeletons, doc drafts.
- **Me:** rules, numbers, scope, pass/fail gate.
- **Reject rule:** fail verify/tests → fix or revert.
